DreamPMS full-flow test guide

Tester A: Ibrahim | Revised 21 October 2026 | Test site: https://pms.sauinndream.com

This replaces the Tester A PDF dated 15 October 2026. It is a staging acceptance test, not approval to operate a production hotel or submit real authority reports.

Execution status: IN PROGRESS. The staging database was reset on 21 October 2026 at 12:12:24 EAT, retaining Ibrahim and Khalfan. The clean baseline and anonymous platform-access redirect passed. Step 1.1 is waiting for the tester's admin sign-in; the authenticated scenarios have not run. See `tester-a-run-2026-10-21.md` for observed results. The steps below describe expected outcomes, not blanket passing results.

Before starting

- Confirm the target is the staging database `sauinndr_pms`, not the developer's local database or another environment.
- Reset retention was explicitly approved for both Ibrahim and Khalfan. Their passwords, verified status, two-factor setup, recovery codes and passkeys were preserved and compared exactly with the pre-reset records. Do not put these secrets in this document.
- Take and verify a restricted-access database backup outside the web root before resetting. Pause application writes and background work during the reset. Keep the app encryption key unchanged.
- Clear tenant/business data, non-retained accounts, sessions, invitations, reset tokens and queued work. Keep the migration/schema infrastructure and the system's default Essential plan; an empty plan catalogue prevents organization registration. Do not run the demo-user seeder.
- Verify the clean baseline with actual counts: no organizations, properties, guests, reservations, folios, financial postings or tenant subscriptions; only the approved platform-admin accounts. Record the reset time and retained account count.
- Review stored documents/uploads separately. A database reset alone does not delete files. Confirm the scope before deleting file storage or backups.
- Use synthetic guests, document numbers and payments only. All examples in this guide are test data. Keep ZAN Gateway, VFMS and channel production delivery disconnected; do not submit these scenarios to an authority or charge a real card.
- The operator narrates each section in the shared browser. The tester opens the preview panel to watch. Use a separate isolated browser session for each role, and record the session-to-role mapping.
- Pause for the tester to enter passwords, email-verification links, invitation links and authenticator codes. Never bypass email verification or two-factor authentication, and never record passwords, QR secrets or recovery codes in screenshots or videos.
- Type money as normal amounts: `25` means USD 25.00; `80` means USD 80.00; `150000` means TZS 150,000. Do not type `8000` to mean USD 80.00. This applies to plans, rates, payments, refunds, thresholds, cashier floats, write-offs and invoices.
- D0 means the property's business date shown in the header or Night audit. Record it after setup. D0+3 is three business-calendar days later. Use YYYY-MM-DD in CSV files.
- Follow the numbered order. Read any errors before retrying a financial action. Mark each step PASS, FAIL, BLOCKED or NOT RUN, with evidence and a finding number where needed.
- After the reset, create every owner and staff account through the normal UI. Do not seed memberships, reservations or payments to make a test pass.

Accounts and access

Code	Role	Email	Access under test
P	Platform administrator	ibrahimsa477@gmail.com	Platform pages, not membership of a hotel. Retained by explicit reset approval.
U1	Owner	imdeveloper128@gmail.com	Creates Bwawani Bay Hotels and manages both properties.
U2	Property manager	imvibecoder128@gmail.com	Bwawani Bay Hotel only; setup, housekeeping supervision, approvals and night audit.
U3	Front desk	astrosaid76@gmail.com	Bwawani Bay Hotel only; reservations, guests, check-in/out and payments.
U4	Finance	astrovision255@gmail.com	Bwawani Bay Hotel only; corrections, refunds and write-offs.
U5	Housekeeping	astro.znz67@gmail.com	Bwawani Bay Hotel only; assigned room cleaning.
U6	Auditor	mwanaishao384@gmail.com	Both properties; read only, with identities masked.
U7	Second organization owner	hferej86@gmail.com	Rival Inn A only; cross-organization isolation tests.

Khalfan's admin, khalfanmakame96@gmail.com, was also retained and remains outside this test run. Never change its login, two-factor setup or role. Plans are global: use TEST-A and leave Essential and its Default flag unchanged.

Run record

Item	Recorded value
Reset approval, target and time	Both admins approved; staging sauinndr_pms; 21 October 2026, 12:12:24 EAT
Retained platform administrator(s)	Ibrahim and Khalfan; two accounts, two platform-admin assignments and one passkey
Private backup verified	PASS: successful SQL dump, gzip integrity, all 71 table definitions and completion marker; stored privately outside the web root. Restore rehearsal not performed.
Fresh-baseline counts verified	PASS: zero organizations, properties, guests, reservations, folios, postings, subscriptions, jobs and outbox messages. All other old data cleared; migration history, Essential plan and approved admin authentication retained. Verified from an independent database connection.
Deployed commit / test date	5f0f38c / 21 October 2026
D0 / business timezone	Record after property setup
R1 / R2 / R3 / R4	Record reservation numbers

Item	Recorded value
R5 / R6 / R7 group and both children	Record reservation numbers
Imported reservation / race winner	Record reservation numbers
UI evidence directory / recording reference	Live shared preview at admin login. PF-01 redirect verified by browser navigation and DOM assertion. Recording is off for credential entry.
Overall result	IN PROGRESS: clean reset passed; waiting at step 1.1 for admin sign-in

1. Platform administrator: clean start

Step	Who	Action	Expected result
1.1	P	Open the login page in the platform session. Sign in using the retained credentials. Use Forgot password only if recovery is actually needed.	Password and two-factor setup survive the reset. Old tenant sessions do not.
1.2	P	Complete the authenticator challenge. If the retained admin has no confirmed two-factor setup, enable it in Settings / Security and save recovery codes privately.	Platform access requires two-factor. Existing two-factor is not reset for convenience.
1.3	P	Open Organizations.	No tenant organizations after the clean reset; no guest data appears in platform lists.
1.4	P	Open Plans. Confirm Essential is the default, monthly, USD 49.00. Add Test plan A: code TEST-A, property limit 2, room limit 10, trial 7 days, grace 3 days, monthly, price `25`, USD, Default unticked.	TEST-A shows USD 25.00; Essential is still the default.
1.5	P	Edit TEST-A price to `30`. Try creating another plan with code TEST-A.	Price shows USD 30.00. Duplicate code is refused.
1.6	P	Open Platform staff. Compare it with the approved retained-admin list.	Only approved retained administrators exist; no owner/staff account has a platform role.

2. Owner registers the organization

Step	Who	Action	Expected result
2.1	U1	In a separate owner session, open Create account. Enter the owner's name and email; the tester enters the password.	Password requirements are shown; successful registration opens email verification.
2.2	U1	Open the actual verification email and follow its link in the owner session.	Organization setup opens. No server-side verification bypass is used.

Step	Who	Action	Expected result
2.3	U1	Create organization Bwawani Bay Hotels, country Tanzania. Create property Bwawani Bay Hotel: Hotel, Zanzibar, Mizingani Road, Stone Town, Mjini Magharibi, phone +255777000001, property email U1, timezone Africa/Dar_es_Salaam, USD. Choose 4 stars and test Z-number `TEST-A-Z-NOT-REGISTERED` in the Hotel tab / ZRA tax registration disclosure. Leave ZRA hotel code empty.	Non-demo property is created in setup. The synthetic Z-number and 4-star value persist. They are not asserted to be real registrations.
2.4	U1	Sign out and back in. Open Properties and complete owner two-factor setup when requested.	Progress persists. Owner-only sensitive pages require two-factor.
2.5	U1	Open Subscription.	Trial on Essential, trial end date and usage of one property.
2.6	P	Refresh Organizations in the platform session.	Bwawani Bay Hotels appears with U1 as owner and one property; guest data remains unavailable.

If the property was created without its test classification, set it before recording expected levy values. A later star change can version the levy on a later business date; inspect effective dates rather than adding another levy.

3. Property setup and screen regression checks

Step	Who	Action	Expected result
3.1	U1	Properties / Edit Bwawani Bay Hotel. Open Hotel, Front desk, Tax & ZRA and Payments tabs. Set receipt prefix BBH. Keep close time 02:00, room inspection off, minimum stay 1, maximum overbooking 0 and automatic checkout off for the baseline. Save and reopen.	Tabs display their own settings. Values persist without changing hidden-tab values or the selected jurisdiction/currency.
3.2	U1	Check the sidebar. Open Calendar from Front desk. Open Night audit and record D0.	Sidebar groups are Front desk, Money, Setup and More. Calendar is in Front desk. Header and Night audit agree on business date.
3.3	U1	Add room types: STD / Standard Double (base adults 2, max adults 2, max children 1, max occupancy 3); DLX / Deluxe Sea View (2, 3, 2, 4); FAM / Family Suite (3, 4, 2, 5). Try code STD again.	Three room types; duplicate code refused.
3.4	U1	Add rooms 101, 102, 103 as STD / floor 1; 201, 202 as DLX / floor 2; 301 as FAM / floor 3. Try room 101 again.	Six rooms; duplicate number refused. New rooms are dirty, not ready.
3.5	U1	Add Bed and breakfast, code BB, USD, own prices, all room types. Set cancellation free until 3 days before arrival, then first-night charge; no-show first-night charge.	BB and policies persist.

Step	Who	Action	Expected result
3.6	U1	Calendar / BB: set nightly prices D0 through D0+60: STD `80`, DLX `120`, FAM `180`, extra adult `20`, extra child `10`.	USD 80.00 / 120.00 / 180.00, not USD 8,000.00 / 12,000.00 / 18,000.00.
3.7	U1	Add Non-refundable, code NR, derived from BB, percentage -10.	Base nightly prices USD 72.00 / 108.00 / 162.00 without entering another price grid.
3.8	U1	Set BB minimum stay 2 on D0+14. Set NR stop-sell on D0+10.	Restrictions appear on their dates and affect availability/booking validation.
3.9	U1	Open Taxes. Inspect the automatically created VAT and Infrastructure levy rules, including effective dates, inclusion, applicability and currency. Do not add duplicates.	VAT estimate is 15%, included, rooms and extras. For this 4-star test property, the seeded levy estimate is USD 5 per guest/night, added on rooms. Record the effective rule actually shown.
3.10	U1	Preview tax breakdown for amount `80`, USD, D0, 2 guests, room.	VAT is inside USD 80.00. With an effective USD 5 levy, USD 10.00 is added and gross is USD 90.00. Flag duplicate levies or an unexpected effective-date change. These are local estimates, not a VFMS acceptance result.
3.11	U1	Put room 103 out of service from D0+3, returning D0+5, reason Painting.	STD physical availability is one lower on the affected nights and recovers on the return date.
3.12	U1	Review taxes, then use Mark taxes reviewed on the checklist. Check Z-number and Star rating gates. Do not activate yet.	All setup gates pass, including the two fields missing in the earlier test. Tax review is an explicit action, not assumed from filling fields.
3.13	U1	Add non-demo property Bwawani Arusha Lodge: Lodge, Mainland Tanzania, Arusha / Arusha, TZS.	Two properties. Mainland checklist explains that receipts are non-fiscal; Zanzibar requirements are not applied to it.

4. Invite the staff

Step	Who	Action	Expected result
4.1	U1	Switch to Bwawani Bay Hotel. Invite U2 as Property manager, scoped only to that property.	Pending invitation and email.
4.2	U1	Invite U3 Front desk, U4 Finance and U5 Housekeeping for Bwawani Bay Hotel only. Invite U6 Auditor for both properties.	Four more invitations with the correct scopes.
4.3	U1	Invite U3 again while its invitation is pending. Invite revoke-test@example.com and revoke that invitation.	Duplicate refused; revoked invitation cannot be accepted.

Step	Who	Action	Expected result
4.4	U2-U6	Each tester opens the actual invitation email, registers with the same invited email, verifies email and accepts the invitation. Pause for credentials and email access.	Correct property and role-specific navigation. Invitation acceptance does not grant a platform role.
4.5	U1	Open Members.	U1-U6 are present with the intended roles and property scopes; Invite staff is complete.

5. Before go-live: sample booking, import and demo

Step	Who	Action	Expected result
5.1	U2	Reservations / New booking. Enter lead guest Hassan Ali (A), email b2@example.com, country Tanzania. Choose arrival D0, departure D0+1, room 101, BB, 2 adults, Phone, booked through Guest directly. Confirm.	One form captures guest, dates, room and rate. Reservation number appears and room 101 is assigned. There is no prerequisite Bookers workflow.
5.2	U2	Use Check in on that reservation's own page.	Refused because the non-demo property is still in setup. No occupied room or partial check-in is created.
5.3	U2	Void the sample booking with reason Pre-live test booking.	Void status; inventory and room assignment released; sample-booking checklist evidence remains.
5.4	U2	Download the current future-reservations CSV template. Fill row 1: source reference OLD-A-001, STD, BB, D0+25 to D0+27, 2 adults, 0 children, synthetic guest fields and confirmed status. Row 2 uses reference OLD-A-001-X and room type XXX. Row 3 repeats row 1. Keep the downloaded column names. Upload for dry run.	Row 1 valid, row 2 reports invalid room type, row 3 reports duplicate reference. Dry run creates nothing.
5.5	U2	Keep only valid row 1, upload again and commit.	Exactly one imported reservation; record its number. Import checklist completes.
5.6	U2	Re-upload the same file and commit.	Duplicate skipped; no second reservation.
5.7	U1	Create a demo from Properties and switch to it. Inspect its badge, rooms and rates.	Demo label is unmistakable. Data is separate from the non-demo property.
5.8	U1	If necessary fill test Z-number `DEMO-TEST-ONLY`, a test star rating and review the demo's taxes. Attempt activation only through the UI, then delete the demo using its own action.	Activation is refused even if every checklist gate passes: a demo can never go live. Deletion removes the demo only. Do not weaken this guard to finish a test.
5.9	U1	Switch back to Bwawani Bay Hotel. Confirm the property name and absence of the Demo badge.	Main test continues on the non-demo property, not on a demo.

6. Activate the non-demo staging hotel

Step	Who	Action	Expected result
6.1	U1	Dashboard checklist / Go live on Bwawani Bay Hotel.	Checklist disappears and the normal dashboard opens. This activates a staging property; it does not prove production ZRA readiness.
6.2	U1	Click New booking from the normal dashboard, then return without submitting.	Same booking form as Reservations / New booking, in the correct property.
6.3	U2	Open Housekeeping.	Newly created rooms are Dirty / Not ready. Activation does not falsely mark them cleaned.

7. Housekeeping and readiness

Step	Who	Action	Expected result
7.1	U2	Assign cleaning for 101, 102, 103, 201 and 301 to U5 for D0.	Five assignments, correctly scoped.
7.2	U5	Open My rooms and mark each assigned room done.	On this synthetic staging property, rooms become Clean and Ready with inspection off. Status history identifies U5. Never use this test to certify a real room's cleanliness.
7.3	U5	Open /guests and /open-balances directly.	Refused; no guest identity or financial data leaks.
7.4	U2	Override readiness for dirty room 202 with reason Synthetic VIP early-arrival test.	Explicit override is recorded with actor and reason; ordinary cleaning history is not fabricated.
7.5	U2	Inspect room 101 history. Optionally turn inspection on, have U5 clean a test room, then record Fail with reason and Pass with U2; restore inspection off.	Every transition is attributable. A failed/pending inspection is not ready. If optional inspection is skipped, record NOT RUN.

8. Bookings, guests and check-in

Use the inline lead-guest fields. Extra staying guests are attached from the reservation's Guests page. A saved booking without documents is not necessarily eligible for check-in.

Step	Who	Action	Expected result
8.1	U3	Find availability for D0 and D0+3.	Counts and prices reflect the stay; room 103's out-of-service period reduces STD availability on the affected nights.

Step	Who	Action	Expected result
8.2	U3	R1: New booking, lead guest Amina Juma (A), b1@example.com, country Tanzania, no document yet; D0 to D0+2, room 101, BB, 2 adults, Direct, Guest directly.	Confirmed, room assigned, lead guest attached. Record R1. Country is chosen from the dropdown.
8.3	U3	Open R1 / Check in.	Refused for incomplete guest registration; confirmed status and room remain unchanged.
8.4	U3	Add Amina's NIDA document TEST-A-Z1234567, country Tanzania. Attach Juma Ali (A) without a document. Try check-in again.	Refused, identifying the incomplete guest/required fields. Do not create a second Amina merely to add her document.
8.5	U3	Add Juma's passport TEST-A-TZ123456, Tanzania. Check in R1.	Checked in; room 101 Occupied. No future date, setup or readiness guard is bypassed.
8.6	U3	R2 walk-in: D0 to D0+1, room 201, NR, 1 adult, lead guest Fatma Said (A), Tanzania, test NIDA TEST-A-FATMA-01. Use Walk-in, confirm and check in.	Valid walk-in saves and checks in. Walk-in ID requirements are enforced. Record R2.
8.7	U3	R3: D0 to D0+1, room 102, STD / BB, Phone, lead guest Hamad No-show (A). Do not check in.	Confirmed; reserve for the no-show test. Record R3.
8.8	U3	R4: D0+7 to D0+8, STD / BB, lead guest Rehema Cancel (A). Cancel with reason.	Cancelled within free window; no cancellation fee. Record R4.
8.9	U3	R5: D0+1 to D0+2, DLX / BB, lead guest Neema Late-cancel (A). Cancel. Post the proposed fee.	First-night cancellation fee USD 120.00 proposed and then posted once, with fiscal-exception flag where shown. A flag is not a fiscal receipt. Record R5.
8.10	U3	R6: D0+5 to D0+7, STD / BB, lead guest Said Channel (A). Source Booking received outside integration; reference BDC-A-1001; reason Channel manager down, received by email. Collector Channel; collected amount `160`.	Confirmed, Requires reconciliation, USD 160.00 channel amount. Missing reference/reason/amount is refused. Record R6.
8.11	U3	R7: use Find availability / Book this room for STD / BB, D0+12 to D0+13, 2 rooms, lead guest Group A. Leave assignment unassigned.	Two linked reservations in one booking group. Record group and child numbers; no physical room is silently assigned.
8.12	U3	From availability / Book this room, save a separate one-room STD booking D0+20 to D0+21 with Leave unassigned and own nightly rate `25`.	Saves without a room, shows fixed USD 25.00 nightly price. Check-in is refused until a ready room is assigned. Void it with a test reason after verifying.
8.13	U3	Try BB / STD, D0+14 to D0+15, one night. Review the minimum-stay warning and use an explicit override reason only if the role permits it.	Restriction is not silently ignored. Allowed override is recorded; otherwise access/refusal is recorded as the observed result.
8.14	U3	Try NR arrival D0+10.	Stop-sell appears and is enforced; no silently accepted unrestricted booking.

Step	Who	Action	Expected result
8.15	U3 + U2	In isolated role sessions, both prepare FAM, D0+15 to D0+16, different synthetic guests, with overbooking kept at 0. Submit concurrently.	Exactly one succeeds for the single FAM room. The loser gets an availability refusal, not a duplicate/overbooked reservation.
8.16	U3	Amend R6 departure to D0+8. Review the amendment/restriction preview and save.	One extra night is priced; amendment history records the change. Existing channel collection is not silently increased.
8.17	U3	Search Amina Juma (A). Open Upcoming, Today, In house, Past and All.	R1 is searchable. Today includes the relevant D0 arrivals; In house includes R1/R2; Past includes cancelled/void history. Each selected tab changes its filter.
8.18	U3	Start a tour-operator booking with Booked through Tour operator and omit its required fields. Then fill synthetic operator TEST-A Operator, registration TEST-A-TO-NOT-REGISTERED and an available pays-for choice. Save, inspect details, then void with reason.	Required operator fields are validated. Saved operator, meal plan and payment responsibility persist. No legacy booker is required.

9. In-house stay, folios and money

Step	Who	Action	Expected result
9.1	U3	Cashier shifts / Open shift with USD float `100`.	One open shift for U3; USD 100.00 float.
9.2	U3	R1 / Post an extra: Minibar, quantity 2, VAT-inclusive unit price `5`.	USD 10.00 charge with tax lines. The room-only levy is not added to an extra.
9.3	U3	Record Cash payment `50`, reference TEST-A-CASH. Open its receipt.	USD 50.00 payment, BBH-prefixed non-fiscal receipt; cashier collection increases once.
9.4	U3	Record Card charged outside Thedream `30`, Visa, last four 4242. Try entering a full card number in a separate unsaved attempt.	USD 30.00 external-card record saves. Full card number is rejected/not accepted by the last-four field. No card charge is initiated.
9.5	U3	Move R1 from 101 to ready room 103, keeping original prices.	R1 is in 103; room 101 becomes Dirty; no duplicate occupancy.
9.6	U3	Extend R1 to D0+4, then try D0+3.	First refused because room 103 is out of service during new nights; second succeeds, prices only the valid added night(s) and records history.
9.7	U3	Attach a second adult with a valid synthetic document to in-house R2.	Staying guest and occupancy update, subject to room capacity; no duplicate guest is introduced unnecessarily.
9.8	U3	Post Laundry `15` to R2. Copy R1's USD folio ID and Move that charge there with reason Test transfer.	Original is marked moved out and linked to moved-in posting; amount and taxes are preserved and counted once.

Step	Who	Action	Expected result
9.9	U3	Open another R1 folio in EUR.	Separate EUR balance; no addition to USD or currency conversion.
9.10	U4	Reverse R1's minibar charge with reason Wrong item.	Original remains with linked reversal; balance decreases USD 10.00.
9.11	U2	Approvals / set USD threshold `50`.	USD 50.00 threshold persists, not USD 5,000.00.
9.12	U4	R1 refund `20`, Bank transfer, TEST-A-RF1, explicit test reason.	Below-threshold refund posts immediately and changes the balance once.
9.13	U4	R1 refund `60`, Bank transfer, TEST-A-RF2, explicit test reason. Try approving it as U4.	Pending approval, balance unchanged; self-approval refused.
9.14	U2	Approve the pending request in U2's session.	Refund posts once; balance changes and decision is attributable.
9.15	U3	R6 / Record payment / Channel-collected, then attempt it again.	USD 160.00 posts once. Second attempt cannot duplicate channel collection.
9.16	U3	First R7 child / Bank transfer payment `50`, reference TEST-A-GROUP-DEPOSIT.	USD 50.00 recorded as a deposit before arrival.
9.17	U3	Inspect Payments and dashboard Collections for D0.	Methods, deposits, refunds and reversals reconcile to postings; different currencies are not summed together.

10. Night audit and no-show

Step	Who	Action	Expected result
10.1	U3	Open Night audit.	View allowed; no Start action for front desk.
10.2	U2	Start night audit for D0; submit twice quickly if the UI permits a second attempt.	One close only. R1/R2 room charges post once; R3 proposed as no-show. U3's open shift is an exception, not silently closed.
10.3	U2	Reopen the summary and compare balances/charges.	No duplicate postings; business date advances once to D0+1. Night audit itself does not check guests out.
10.4	U2	Confirm R3 no-show.	No-show status, room 102 released and first-night fee proposal.
10.5	U3	Waive R3's fee with reason Guest called, goodwill.	Waived, actor/reason recorded, no fee posting added.

The scheduler also runs night audit at the property close time. If a real day passes or a scheduled close happens mid-test, record the actual business date and reconcile it before continuing. Do not reset the clock or claim a duplicate close passed without comparing postings.

11. Check-out, open balances and cashier close

Step	Who	Action	Expected result
11.1	U3	On D0+1, attempt R2 check-out while its folio has a positive balance.	Refused, naming the outstanding folio(s); no front-desk override.
11.2	U3	Pay R2's exact remaining balance by Mobile money, reference TEST-A-R2-SETTLE, then check out.	All R2 folios settled; checked out once; room 201 Dirty.
11.3	U3	R1 / Depart early today. Try check-out while balance remains open.	Valid early departure is recorded; front desk cannot bypass unpaid balance.
11.4	U2	Check out R1 using the manager balance override, reason Company pays by transfer.	Checked out with explicit reason; R1 remains in Open balances.
11.5	U4	Attempt to write off more than R1 owes. Then write off `10`, reason Test uncollectable balance.	Excess refused. USD 10.00 posts, or waits for approval if a configured threshold requires it. Remaining debt is accurate.
11.6	U3	Close U3's shift with a counted amount USD 5.00 below the displayed expected total; reason Count test.	Shift closed once, Short USD 5.00 variance. Deposits/refunds/reversals are reflected in the expected total.
11.7	U3	Attempt another cash payment without opening another shift.	Refused. No receipt or partial cash posting created.

12. Roles, revocation and guest records

Step	Who	Action	Expected result
12.1	U6	Open Reservations, Guests, Open balances and Night audit in the auditor session.	Read only; identity values masked; no mutation controls or usable mutation endpoints.
12.2	U6	Open /reservations/create directly.	Refused; hiding New booking alone is insufficient.
12.3	U3	Open the property switcher. Try a copied Bwawani Arusha Lodge property-scoped link.	Only Bwawani Bay Hotel is available. Other property's data is not exposed by direct navigation.
12.4	U5	Paste a guest-detail link from U3.	Refused with no identity/guest data.
12.5	U2	Open Amina's identity documents. Compare with the agreed property-manager requirement.	Record whether values are readable or masked. The current role definition appears to omit identity-view permission; treat a mismatch with the agreed requirement as a finding, not a pass.

Step	Who	Action	Expected result
12.6	U3	Use Check for a returning guest with Amina's existing document number.	Existing guest is offered. No cross-organization matching occurs.
12.7	U2	Intentionally create a synthetic duplicate Amina if permitted, then merge into the original.	One surviving guest with stays/documents preserved; no lost reservation links.
12.8	U1 + U3	Remove U3 from the organization while U3 keeps an old tab open. U3 then follows a link and attempts an action.	Access revoked immediately on the next request. Cached navigation is not authorization.
12.9	U1 + U3	Invite U3 again as Front desk for Bwawani Bay Hotel only; accept as the same existing account.	Access restored with intended scope, no duplicate account and no escalation.

13. Second property and organization isolation

Step	Who	Action	Expected result
13.1	U1	Switch to Bwawani Arusha Lodge. Add GRD (base 2, max adults 2, max children 1, occupancy 3), room G1, plan Room only / RO / TZS. Set prices `150000` for D0 through D0+30. Select only Document number for mainland guest registration.	TZS 150,000, whole shillings. Mainland registration options persist without changing Zanzibar's fixed requirements.
13.2	U1	Review applicable mainland taxes and mark reviewed, then activate this non-demo staging property. Mark synthetic room G1 cleaned through the UI.	Mainland setup does not demand Zanzibar registration or star classification. Property/room readiness is explicit.
13.3	U1	Make a synthetic one-night RO booking with own nightly rate `25`. Open its TZS folio; record Bank transfer `25`, reference TEST-A-TZS25. Open receipt, reverse the simulated payment with reason Test cleanup, then void the unstarted booking.	Rate and receipt show TZS 25, not TZS 2,500. After reversal balance is zero; void releases inventory and retains the audit trail.
13.4	U1	Archive and restore Bwawani Arusha Lodge once no future booking/open balance remains.	Leaves switcher while archived; restored with data intact.
13.5	U1	Try archiving Bwawani Bay Hotel, which still has future bookings/open balances.	Refused with blockers; no partial archive.
13.6	U7	Register and verify U7 in its own session. Create organization/property Rival Inn A, Zanzibar, USD, using synthetic setup data.	Separate organization; cannot see Bwawani data. No need to activate it for isolation checks.
13.7	U7	Open copied R1 and Amina detail URLs before creating any matching record.	Not found/refused; no guest identity, dates, folios or financial details leak.
13.8	U7	Add a synthetic Amina with the same contact/document details inside Rival Inn A.	Separate guest; never matched or merged into Bwawani's guest.

Step	Who	Action	Expected result
13.9	P	Open Organizations.	Bwawani Bay Hotels with two properties and Rival Inn A are listed; no hotel guest data is disclosed.

14. Subscription and SaaS invoices

Use the unchanged Essential price, USD 49.00. TEST-A is only a plan-management test and is not silently substituted for the owner's subscription.

Step	Who	Action	Expected result
14.1	P	Issue a SaaS invoice for Bwawani Bay Hotels.	Invoice number, USD 49.00 and due date. A SaaS invoice is not a guest folio or fiscal receipt.
14.2	U1	Open Subscription.	Invoice shown Open with USD 49.00 owed.
14.3	P	Record Bank transfer `20`, reference TEST-A-PAY1.	USD 29.00 outstanding; invoice remains Open.
14.4	P	Attempt payment `30`.	Refused because USD 30.00 exceeds USD 29.00 owed; no partial posting.
14.5	P	Record `29`, reference TEST-A-PAY2.	Paid, zero outstanding; no duplicate receipt/payment on refresh.
14.6	U1	Refresh Subscription.	Subscription is Active with current-period end and attributable status/history change.
14.7	P	Grant U6 Compliance operator, inspect it, then remove that platform role. Recheck U6's old session.	Grant/removal is audited and takes effect. U6 never gets Platform administrator; its tenant Auditor role is unchanged.

15. Browser, accessibility and security checks

Step	Who	Action	Expected result
15.1	U3	Use a phone-sized viewport. Open/close sidebar, select Reservations and open New booking without submitting. Inspect an existing folio.	Menu closes after navigation; forms and amounts remain usable without horizontal page scrolling or hidden primary controls.
15.2	U1	Switch light/dark themes; navigate tabs and the country select using the keyboard.	Labels, focus, validation and amounts remain readable; interaction does not rely only on color.
15.3	U3	In a disposable unsaved form, type an invalid amount and a fractional TZS amount.	Invalid/negative/unsupported precision is rejected rather than silently posted or rounded.

Step	Who	Action	Expected result
15.4	U7	Last, in a separate session, try a wrong password six times or until throttling appears. Do not use P or another critical account.	Rate limit/backoff shown. Stop at the limit; do not evade it with other IPs or repeated retries. Record actual threshold and impact.
15.5	Operator	Review screenshots, console/network failures and the run record.	Every claimed PASS has observed evidence; failures and blocked human steps are explicit. No passwords, QR secrets, recovery codes or real identity documents are in evidence.

Coverage that must not be claimed as passed

- ZAN Gateway reporting, VFMS fiscal issuance, fiscal receipts, live channel delivery and production transport/credentials are separate integration work. A non-fiscal receipt or local fiscal-exception flag does not test them.
- Automatic checkout stays off for the baseline so it cannot change the manual checkout scenarios. If tested later, use an isolated test property and observe the actual scheduled run, paid/unpaid/overstay settings and summary email. Otherwise mark NOT RUN.
- Maintenance tickets and calendar drag-and-drop are not demonstrated by this guide's calendar/navigation checks. Record NOT IMPLEMENTED or NOT RUN rather than claiming coverage.
- A sequential race attempt is not a concurrency test. If independent concurrent submissions cannot be observed, mark step 8.15 BLOCKED.
- If mail or authenticator access is unavailable, stop the affected role's branch and record BLOCKED. Do not fill in a passing result from database fixtures or API shortcuts.
- This guide does not authorize changing real registration numbers, certifying a real star classification, marking real rooms clean or using the staging site for real guest operations.

Findings and completion record

Step	Status	Actual result / finding	Expected result	Severity	Evidence / retest
Baseline	PASS	Approved reset completed, both admins' authentication preserved, backup integrity and empty business tables verified.	Verified clean baseline and preserved admin authentication.	-	Run report contains timestamp, counts and backup reference. Restore rehearsal not performed.
PF-01	PASS	Anonymous navigation to /platform/organizations redirected to /login; no platform data shown.	Protected platform pages require authentication.	-	Browser navigation and DOM assertion, 21 October 2026.
1.1	BLOCKED	Login page is open with Ibrahim's email entered; awaiting tester's password and two-factor sign-in.	Existing admin signs in without changing password or resetting two-factor.	Human action	Enter credentials in the shared preview, not in chat.

Step	Status	Actual result / finding	Expected result	Severity	Evidence / retest
12.5	NOT RUN	Pre-check: manager identity-view permission needs reconciliation with the agreed requirement.	Role behavior matches the agreed requirement without exposing identities to other roles.	To assess	Observe during the role test.
All remaining steps	NOT RUN	Authenticated flow has not started.	Perform in order and record actual outcomes.	-	Add evidence as each section finishes.

At the end, record PASS / FAIL / BLOCKED / NOT RUN totals, all created account/property/reservation identifiers, financial reconciliation, unresolved issues and the next retest. Do not wipe the evidence database again unless the tester explicitly requests another reset.
